What is C-Gate :

Tador Technologies C-Gate is a remote control device that opens automatic gates and doors using a cellular phone. The device easily connects to the gate door switch, and is operated by receiving calls recognizing the calls and open the gate

How many different phones can open my gate?

Tador Technologies C-Gate accepts up to 1,600 full numbers. In additional 400 Special Phone Numbers available that allow entrance to the building by time and days of the week.

How Does It Works :

Tador Technologies Ltd C-Gate incorporates a professional industrial grade GSM engine that receives calls at its SIM number, as any ordinary GSM phone. You need to use any operator that operates in the 900/1800 Mhz band, that is the standard in Europe and most parts of the world just to give an example, if your SIM has a phone number 445-1234567, that is the number you have to call to open the gate. Tador Technologies Ltd C-Gate has a memory where you will store the numbers of people enabled to open your gate (up to 1600) When the C-Gate receive a call, It check it number database and if the number is stored in the memory the C-Gate will hang up the call and open the gate

Working Distance ?

Tador Technologies C-Gate doesn't have limitations like a normal remote control. Using a mobile phone you can open from very far away, even from another city! It is really convenient to arrive in front of your house when the gate is already open, without having to wait in the middle of the road.

Does It Cost To Open The Gate ?

Tador Technologies Ltd C-Gate doesn't answer the call, it simply checks the caller ID. Your network must send the caller ID otherwise the C-Gate won't work. Usually operators don't charge until you answer the call, so it won't cost you anything to open the gate with the C-Gate. Of course you need to have an active SIM inside it, and this may have a monthly fee regardless of the calls.
